

MISTRAL SOLUTIONS

VISIT AT 4.1.4D

Mistral is a product design and system engineering company providing end-to-end services for product development and deployment

The Mobile C4ISR platforms from Mistral are a range of Special Purpose Vehicles for law enforcement agencies, Special Forces, defense, airports and private security agencies. These are easily deployable solutions targeted at requirements such as VIP security, public events (sports, entertainment shows, and political rallies), law and order control, emergency/disaster management, tactical security operations and critical infrastructure protection.

The Mobile C4ISR platform is a quickly deployable solution with a spacious, well equipped work space that can be customized to suit different operational needs. The solution consists of a customized vehicle equipped with either or all of the following: IP video surveillance equipment, video management and analytics, command and control modules and monitoring stations, wireless radios and tactical electronics.

Key Features:

- Communication matrix providing interoperability between various agencies and their radios
- Body worn non-line of sight long range wireless cameras, tactical cameras, fixed wireless cameras and PTZ Camera
- Video wall to receive and showcase camera feed
- Voice, data and video communications
- In-built genset, UPS and battery backup
